

SELLING POINTS FOR LOSP

William Bricken

February 1987

1. More compact notation than Propositional Calculus.
2. More efficient deductive technique than resolution.
3. Integration of functional programming (LISP) and logic programming (PROLOG).
4. Canonical (optimizing) compiler language for deduction.
5. Provides maximal AND/OR parallelism.
6. Opportunistic Search over parens structure.
7. Imaginary Boolean value
 - a. Solution to paradox.
 - b. Contradiction maintenance.
 - c. Self-referencing (autonomous) data structures.
8. New machine learning paradigm
9. Single gate (NOR) wiring diagram.
10. New cons-cell coding
11. Deduction that uses little to no memory.
