

SELF-REFERENTIAL META-PSYCHOLOGIES

William Bricken

December 1986

- > Dr. Arthur Fischell, formally at Atari Research Labs, has consented to
- > present one of his famous, although rare, seminar discussions, at our
- > company.
- >
- > The seminar will be in the large conference room, at 11:00 on
- > Friday, December 12, 1986 and is open to all participating staff.

Date: 11 Dec 1986 0307-PDT

From: Dr. Arthur I. Fischell <ARTHUR at ROUNDTABLE>

Message-ID: <[ROUNDTABLE]11-Dec-1986 3:07:00 ARTHUR>

Sender: ARTHUR at ROUNDTABLE

Subject: Research Seminar

Here's the abstract --- art.

SELF-REFERENTIAL META-PSYCHOLOGIES

SEMINAR CONTENT

The study of content and its meaning. How ideas become manifest. Real-time, group-oriented interactional open systems research. Variations in goal structure within a seminar group as a function of decision anxiety. "How to Star in your Own Show". Intermediate and advanced reality definition. The power of distinction in a choice modulated democratic work place. The psychology of psychology, the laws of formation and in-formation, and how inner knowledge breeds outer wisdom.

Probabilistic, relativistic, multi-modal and discrete processes without boundary conditions. Existential detoxification through rubblization. Neural networking and the evolution of space-time within the consciousness of plants. Why nine dimensions is enough for building strings. Freudian archtypicality at light speeds. Post-technological peri-communicative twenty-first-century personality theories. Ninety percent transition states for predecisional action biases. Manifesting magical energy and the ultimate control of time. What we should do now that the aliens have landed. Why they are invisible.

Brownian projections of multi-stimulus event-horizons in a media saturated environment. Making movies. The foundations of mathematics and what we can do about it. Why California ends at the ocean. Transcontinental communication theories of point processes in a seemingly random chain of

coincidences as interpreted by sentient land masses. Hyperbolic memory functions: correction, translation, editing and self-censorship. What I can't tell you about. The secret of secrecy. Who to tell about Santa. How to remember your name. What we have learned from the invasion of sub-molecular self-duplicating touring machines, and the symbiosis of the concept snatching demons. Creatures of ill-importance and the fifth dimensional war for the Moon. When not to use drugs and why heat is expansive. Redundancy operators and how symbolic computers imagine their users. The distance to the edge, the conscious conspiracy of entropic denial systems, the invention of zed, and how life imitates matter.

The philosophical analysis of subconscious activity, transforms of the drastic kind, metaprogramming instruction sets, how to get it from the outside, and the necessity of hard work. Fantasy tools, catastrophic erasures, thought bondage, reentering metaphors, representational spaces, transpersonal acceleration, accumulation of wealth, influence of people, self-assuring deviations, the existence of certainty, kick-starting the Universe, fulfillment of the imagination, the bliss of creation, the two voids, and the final, irreversible, astonishing, blank-screened end.
